OnlineAVL

The core of the Navman wireless tracking system

Locate, monitor and manage

This is a Windows based application providing access to your fleet's activity data via the Internet. This means that you can track, message or monitor your fleet from almost any PC, in any location around the world.

Being a Windows based application means fast access to clear and concise high quality maps and accurate important activity data. Utilising the Internet provides a low cost software solution with reliable and inexpensive communication costs.

OnlineAVL is a low cost yet powerful fleet management tool providing you with all the information you need at your fingertips.

OnlineAVL

Information at your fingertips

The extremely powerful OnlineAVL Solution enables you to achieve higher productivity by having total visibility of your business operations. Whatever your industry or the size of your fleet, Navman offers you affordable real-time productivity!

"We took the road to increased productivity and efficiency."

AMScott, a joint venture between Alfred McAlpine and Scott Wilson, have exploited the advantages offered by the OnlineAVL Solution.

"We deal with motorway emergencies, and therefore chose the Navman Wireless tracking system – with fast access to maps and accurate activity data. This allows us to check the position and availability of vehicles immediately. The amount of time taken to deal with an incident and get traffic flowing again has been drastically reduced. We also use the system to build up a reliable database of important information about where accidents are most likely to occur, helping us to focus resources where they are most needed. The system also provides reliable and inexpensive communications, which has resulted in lower mobile costs."

Barry Sandilands
Operations Manager

Dramatically increase productivity and efficiency

The OnlineAVL system provides:

- Real-time vehicle tracking
- Wide area mapping down to street level
- Multi user functionality
- Historic exception reporting and journey replay
- Daily activity reporting
- Find address function and postcode
- Geofencing
- Two way messaging options

The OnlineAVL solution will benefit your business

Real-Time Information

- Dispatch and allocate new jobs to the nearest vehicles
- Provide transparency on your team's whereabouts
- Confirm ETAs and offer enhanced customer service
- Reduce your team down times

Powerful Management

- Control and reduce your team overtime, fuel and vehicle usage
- Improve your route planning
- Identify your operation's inefficiencies
- Improve your customer quotes and invoices
- Manage compliancy with the Working Time Directive
